

Do you want to learn more about?

- The extent to which current ocean observation and modelling capability limit weather and climate prediction
- How variability in ocean state and circulation can help us to forecast climate
- How changes in ocean heat content might explain hiatus and surge events during long-term global surface warming

Role of the Ocean in Weather and Climate - 2018 (OiWC2018)

Met Office/NERC Advanced Doctoral Training Course

11-16 March 2018 at Met Office, Exeter

Fully funded course for NERC PhD students/early career scientists

Application details at: www.oceansinweatherandclimate.org
